More about the 200P-I1

Start with the easy to use HomePlug AV 200P-I1 and create a home or small business network over existing power sockets and lines. Just plug in the 200P-I1 into any wall socket, connect a network cable, and the data signals are automatically transferred through the power lines. You can bridge modems, routers, PCs, set-top boxes and game consoles right over existing power lines. Couple it with the 4000-R1 wireless gateway and you can turn your single port or FTTH ONT customers into a home or small business wireless LAN without any drilling or fishing or wires!

Features

- Provides Physical Layer Data Rates up to 200 Mbps
- Supports Triple Play Applications such as IPTV, VoIP, and High Speed Internet
- Supports 10/100 Base-T Ethernet
- HomePlug Powerline Alliance Industry Specification Compliant
- Easy Plug and Play Operation

More about the 210P-I1

Need more out of your HomePlug Network? Want to reach the backyard, the storage shed, the deck or patio without using wires or power lines? Add the Wireless N 210P-I1 to the mix and you have the perfect solution. The 210P-I1 creates a wireless N access point where ever you plug it in, on any standard wall socket. Plug it in and create a wireless access node anywhere you want, reach your backyard, your shed, your patio or fill any dead spots you might have inside your home.

Features

- Physical layer data rates up to 200 Mbps
- Extended wireless coverage three times greater than existing 802.11g products
- Supports Triple Play IPTV, VoIP, and High Speed Internet
- Supports 10/100 Base-T Ethernet
- HomePlug Powerline Alliance Industry Specification Compliant

200W-A1

Qty 1-99

\$ 78.00 per box (two units per box)

Qty 100+

\$ 75.00 per box (two units per box)

More about the 200W-A1

Need a secure way to connect two devices without wires? The 200W-A1 can do just that. The dedicated wireless channel between the two units makes a strong, secure, fast connection. Just plug one of the units via Ethernet cable to your router, and then the other unit via Ethernet cable to the device you want to network and the 200W-A1 does the rest! No messy wires or cables, just a secure connection between your router and any Ethernet ready device over the dedicated wireless signal provided by the 200W-A1.

Features

- No configuration Necessary, Works Right Out of the Box
- Units are Auto Paired to Work Together
- High Security and Encryption is Default Setting
- Dedicated WiFi Bandwidth is not Shared
- Speeds up to 54Mbps
