

# Core Telecom Launches Value Added Distribution Partnership with RG Nets, Inc.

Published on 6/3/2015

## Core Telecom Launches Strategic Partnership with RG Nets, Inc. *Core Telecom offer complete solutions*

**St Louis, MO (June 3, 2015)** –Core Telecom, Inc., [www.coretelecom.net](http://www.coretelecom.net) the value-added distributor of networking technology and a complete suite of support and services for Telecom customers has announced that it has entered a distribution agreement with [RG Nets](#), a leading provider of gateway routers and router controllers designed to manage, provision, and protect revenue-generating networks.

[RG Nets'](#) next-generation data, voice and video revenue generating network router combines the latest and most complete set of technologies to maximize operator profitability and minimize cost.

All of the functions and features required in today's revenue-generating policy-enforcement networks are bundled in each rXg device. Whether in fixed wireless broadband, large scale hot-zones, WiMAX blankets, WiFi hotspots or wired / wireless enterprise, MDUs and campuses, the rXg is the perfect platform for clear communication, authoritative control, and complete cognizance over your end-user population.

"RG Nets' feature-rich gateway router provides our telecom customers simplicity and versatility to deploy carrier class public Internet access networks thanks to a flexible, all-inclusive design," said Ben Boarman, president and CEO of Core Telecom, Inc. "We look forward to growing this partnership as RG Nets products are becoming the defacto standard for WiFi network control with their ability to dynamically isolate individual subscribers into their own network segment. RG Nets products are Telco grade and can be clustered to provide public Internet access from as few as 50 concurrent devices up to tens of thousands with multiple levels of high availability and fault tolerance".

"We feel Core Telecom is our ideal partner for servicing the Telecom market," said Keenan Klinger, RG Nets CEO. "With rXg, operators now have the ability to build exceptional networks that serve today's BYOD customer without a rack full of expensive or hard to use disparate gear. With the Core partnership they can have a network fully provisioned, operational, and supported with one supplier. We are delighted to be a part of their solution."

RG Nets, Inc., manufactures and markets policy-enabling routers and router controllers designed specifically for operators of Internet access networks with a focus on wireless deployments. RG Nets unique blend of routing and gateway functions enables operators of wireless networks to enjoy the same level of control, cognizance and communications within and over their networks as carriers with data center hosted large scale networks. rXg is designed to be the only device required between the wireless network's uplink(s) and the service distribution infrastructure, normally consisting of switches and access points, to enable WiFi service levels without compromise.

Core Telecom Systems, Inc. is an integrated supplier of new and surplus equipment and support services to the telecommunications industry. We offer superior value with world-class customer service across a wide variety of solutions from broadband switching, access, optical and fixed wireless transport to power, batteries and customized cabinetry, including fiber cable, connection and associated tools.
